# SmartAMS 1.5.0

*September 27, 2017*

## New Features

- Redesigned the application to manage assets based on Business Unit.
- Options to have different settings for each business units like date format, currency, number formats and so on.
- While creating business unit, at least one business unit should be set as primary since the entire application works based on application settings.
- Only Global/Super administrator/admin can create settings based on business unit. This option is not available for the other user roles (ex: manager, data entry operators).
- Option to choose Business unit during the login to work on specific business unit. Super admin can login without business unit to see combined results.
- Option to see the Grouped/Child/Linked asset details in a separate tab in asset detail list screen.
- Provided an option to see the Application setting by the standard users. They can't modify the settings but able to see what is set in the settings with the instructions.
- Option edit the settings on the view screen when the Business unit admin/global admin is logged in.
- Option to add the child/linked item directly from the asset list screen.

## Enhanced Features

- If there is any Complaints/Tickets are registered/raised against an asset and the asset falls on Warranty/Insurance/AMC expiry notification, then the asset will be highlighted in critical asset section (dashboard).
- Sample Number format is shown in the list in Number format settings screen.
- User can view the service provider details from asset details view screen by clicking the service provider name.
- Service status and Total service cost is shown in asset service list screen.
- Total number of open and closed tickets/complaints is shown in asset details view screen.
- Business unit name is included in all the sections of the application and reports.
- Assigned business unit for the user will be shown in log-in page dropdown list at the time of log-in.

- Master/Reference data is not maintained by business unit wise.
- While creating new service, finding the assets is made simple by auto filter search.
- Information label is shown in asset detail view screen whether the selected asset have warranty, insurance and AMC such as YES or NO.
- Showing approval status with level information when two levels of approval is enabled.

## Resolved Issues

- Asset Transfer should be done based on approval level set in application setting.
- Error screen pops up while clicking on asset detail track report view.
- Not able to upload files in warranty & insurance renewal screen in asset protection.
